## Description

This function deletes a reseller and **all** of the reseller's cPanel accounts.

### Warning:

- You **cannot** recover deleted accounts. **Use this function with extreme caution.**
- This function deletes the reseller account and **all** of the accounts that the reseller owns.
- To remove reseller privileges from an account but **not** delete the reseller's account or any accounts that the reseller owns, call the WHM API 1 [unsetupreseller](#) function.

## Examples

```
https://hostname.example.com:2087/cpsess#####/json-api/terminatereseller?api.version=1&user=username&terminatereseller=1
```

```
https://hostname.example.com:2087/cpsess#####/xml-api/terminatereseller?api.version=1&user=username&terminatereseller=1
```

```
whmap1 terminatereseller user=username terminatereseller=1
```

### Notes:

- Unless otherwise noted, you **must** [URI-encode](#) values.
- For more information and additional output options, read our [Guide to WHM API 1](#) documentation or run the `whmap1 --help` command.
- If you run CloudLinux™, you **must** use the full path of the `whmap1` command:

```
/usr/local/cpanel/bin/whmap1
```

## Function information

### API

**Version:**

[WHM API 1](#)

**Available in:**

WHM 11+

**Methods:**

GET, POST

**Required**

**Parameters:**

reseller, termi

natereseller

**Return**

**Format**

**s:**

JSON, XML

### Important:

cPanel & WHM version 66 [deprecated](#) XML output.

## About WHM API 1

WHM API 1 performs functions and accesses data in WHM.

## Parameters

Parameter	Type	Description	Possible values	Example
user	string	<b>Required</b> The reseller account's username.	A valid reseller username on the server.	username
terminate_reseller	Boolean	<b>Required</b> Whether to terminate the reseller's main account.	<ul style="list-style-type: none"><li>1 — Terminate.</li><li>0 — Do <b>not</b> terminate.</li></ul>	1

## Returns

Return	Type	Description	Possible values	Example
acct	array of hashes	An array of hashes of function output.	This hash contains the reason, user, and result returns and the output hash.	
user	string	The account username.  The function returns this value in the <code>acct</code> hash.	A valid username.	username
result	Boolean	Whether the function succeeded.  The function returns this value in the <code>acct</code> hash.	<ul style="list-style-type: none"><li>1 — Success.</li><li>0 — Failure.</li></ul>	1
reason	string	A message of success or a reason for failure.  The function returns this value in the <code>acct</code> hash.	<ul style="list-style-type: none"><li>username account removed</li><li>An error message.</li></ul>	username account removed
output	hash	A hash of termination data for the reseller's accounts.  The function returns this hash in the <code>acct</code> hash.	This hash contains the raw parameter.	

- [WHM API 0 Functions - setresellermainip](#) — This function assigns a main IP address to a reseller's account.
- [WHM API 0 Functions - setresellernameservers](#) — This function assigns nameservers to a reseller's account.
- [WHM API 1 Sections - Resellers](#) — Reseller functions allow you to manage your cPanel and WHM reseller accounts.
- [WHM API 1 Functions - acctcounts](#) — This function lists a reseller's total accounts, suspended accounts, and account creation limit.
- [WHM API 1 Functions - getresellerips](#) — This function lists a reseller's available IP addresses.
