## Description

This function combines calls for multiple WHM API 1 functions.

## Examples

```
https://hostname.example.com:2087/cpsess#####/json-api/batch?api.version=1&command=gethostname&command=version&command=editquota%3Fapi.version%3D1%26user%3Dusername%26quota%3D500&command=set_digest_auth%3Fuser%3Dusername%26password%3D12345luggage%26enabledigest%3D1
```

```
https://hostname.example.com:2087/cpsess#####/xml-api/batch?api.version=1&command=gethostname&command=version&command=editquota%3Fapi.version%3D1%26user%3Dusername%26quota%3D500&command=set_digest_auth%3Fuser%3Dusername%26password%3D12345luggage%26enabledigest%3D1
```

```
whmapil batch command=gethostname command=version command=gethostname command=version command=editquota?api.version=1&user=user&quota=500 command=set_digest_auth?user=username&password=12345luggage&enabledigest=1
```

### Notes:

- You **must** [URI-encode](#) values.
- For more information and additional output options, read our [Guide to WHM API 1](#) documentation or run the `whmapil --help` command.
- We introduced this functionality in cPanel & WHM version 11.52.0.8.

## Function information

**API Version:** [WHM API 1](#)  
**Available in:** WHM 11+  
**Methods:** GET, POST  
**Required Parameters:** command  
**Return Format:** JSON, XML

### Important:

cPanel & WHM version 66 **deprecated** XML output.

## About WHM API 1

WHM API 1 performs functions and accesses data in WHM.

**Note:**

Use WHM's *API Shell* interface (*WHM >> Home >> Development >> API Shell*) to directly test WHM API calls.

## Parameters

Parameter	Type	Description	Possible values	Example
command	string	<p><b>Required</b></p> <p>A WHM API 1 function to call.</p> <div style="border: 1px solid red; padding: 5px; margin-top: 10px;"> <p><b>Important:</b></p> <p>Specify a command parameter for each function.</p> </div>	<p>Any WHM API 1 function.</p> <p>Include the function's input parameters as a URI-encoded list after the function name.</p> <p>For example, to call the <code>killdns</code> function with a <code>domain</code> parameter value of <code>example.com</code>, assign the following value to a <code>command</code> parameter:</p> <pre>killdns%3Fdomain%3Dexample.com</pre> <div style="border: 1px solid yellow; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>You can call the same function multiple times within a single batch API call.</p> <p>For example:</p> <pre>/json-api/batch?api.version=1&amp;command=version&amp;command=version&amp;command=version</pre> </div>	version

## Returns

Return	Type	Description	Possible values	Example
result	hash	A hash of function output.	<p>Each result hash contains the returns from one of the <code>command</code> parameter's functions.</p> <p>For information about each function's returns, read the function's documentation.</p>	

• You must use the appropriate WHM ports (2086 or 2087) to call WHM API functions.
