

Purchase and Install an SSL Certificate

For cPanel & WHM version 68

(WHM >> Home >> SSL/TLS >> Purchase and Install an SSL Certificate)

- [Overview](#)
- [Purchase a certificate](#)
- [Additional documentation](#)

Overview

This interface allows you to log in to a user's cPanel interface to purchase an SSL certificate for them through cPanel's [SSL/TLS Wizard](#) interface ([cPanel >> Home >> Security >> SSL/TLS Wizard](#)).

Important:

CAA records in the domain's zone file restrict which CAs (Certificate Authority) may issue certificates for that domain. If no CAA records exist for a domain, all CAs can issue certificates for that domain. If conflicting CAA records already exist, remove the existing CAA records or add one for the desired CA. For example, a CAA record for Comodo would resemble the following example, where `example.com` represents the domain name:

```
example.com. 86400 IN CAA 0 issue "comodoca.com"
```

You can manage CAA records through WHM's [Edit DNS Zone](#) interface ([WHM >> Home >> DNS Functions >> Edit DNS Zone](#)) or through cPanel's [Zone Editor](#) interface ([cPanel >> Home >> Domains >> Zone Editor](#)).

For more information about a CA's requirements, read their documentation.

Note:

This interface automatically enables the following required features to purchase and install SSL certificates from cPanel's [SSL/TLS Wizard](#) interface ([cPanel >> Home >> Security >> SSL/TLS Wizard](#)) for the user:

- cPanel Market — `market`
- SSL Host Installer — `sslinstall`
- SSL/TLS Wizard — `tls_wizard`

For more information, read our [Feature Manager](#) documentation.

Purchase a certificate

The interface displays a list of accounts on the server, their primary domain names, and links that will redirect you to cPanel's [SSL/TLS Wizard](#) interface ([cPanel >> Home >> Security >> SSL/TLS Wizard](#)).

Click [Go to cPanel](#), and then click [Purchase SSL](#) to navigate to cPanel's [SSL/TLS Wizard](#) interface ([cPanel >> Home >> Security >> SSL/TLS Wizard](#)).

Notes:

- Use your own credentials to log in to the cPanel Store, **not** the cPanel user's credentials.
- The system will send the purchase notices to the cPanel user's contact address. If the site owner has **not** configured a contact address, the system will send the notice to the purchaser.

For more information, read our [SSL/TLS Wizard](#) documentation.
