

Resellers

For cPanel & WHM version 60

([Home >> Resellers](#))

This set of features allows you to access a list of your reseller accounts as well as a *Reseller Center*, where you can assign new reseller accounts and configure existing reseller accounts.

- [Change Ownership of an Account](#) — This feature's functionality is now available in the [Modify an Account](#) interface ([Home>> Account Functions >> Modify an Account](#)).
- [Change Ownership of Multiple Accounts](#) — This feature allows you to transfer multiple accounts to a reseller.
- [Edit Reseller Nameservers and Privileges](#) — This interface offers several configuration options for your reseller accounts. You may limit a reseller's ability to create accounts and access various features. You may also confer `root` access, assign nameserver IP addresses for accounts that the reseller created, and add A entries for those addresses.
- [Email All Resellers](#) — This feature allows you to email all of your resellers simultaneously.
- [Manage Reseller's IP Delegation](#) — This feature allows system administrators to specify a shared IP address for a reseller. Multiple resellers can use the same shared IP address; however, a reseller can only dedicate the shared IP address to one account.
- [Manage Reseller's Shared IP](#) — This feature allows system administrators to specify a shared IP address for a reseller.
- [Reseller Center](#) — This set of features allows you to add or remove reseller status on existing accounts. You can also email resellers and configure existing reseller accounts.
- [Reset Resellers](#) — This feature allows you to apply Account Creation Limits (ACLs) to resellers, or reset package permissions to default values.
- [Show Reseller Accounts](#) — This feature lists reseller accounts. The list includes information about the account owner, the accounts owned, the user's domain, and the package that each account uses.
- [View Reseller Usage and Manage Account Status](#) — These features allow you to track your resellers' disk space and bandwidth usage. You can also use this set of features to suspend, unsuspend, and terminate reseller accounts.
