

Server Information for cPanel

(cPanel >> Home >> Server Information)

Overview

The *Server Information* interface displays information about your account and the server that hosts your account. Most of this information is only useful for advanced cPanel users. You can use this interface to determine your server's version of cPanel & WHM or specifics about Apache or PHP on your account.

Server Information

The *Server Information* table displays the following information:

Item	Description
<i>Hosting Package</i>	The hosting package for your account. The hosting package that your account uses determines the limitations of your account (for example, your email account quota or your monthly bandwidth quota). To change your hosting package, contact your hosting provider.
<i>Server Name</i>	The name for the server that hosts your account.
<i>cPanel Version</i>	The version of cPanel & WHM that runs on your account's server. For more information, read our Product Versions and the Release Process documentation.
<i>Theme</i>	The cPanel interface's current theme. You can use the <i>Theme</i> menu in cPanel's <i>Home</i> interface (<i>cPanel >> Home</i>) to select another theme.
<i>Apache Version</i>	Your account's version of Apache. For more information about Apache on cPanel & WHM servers, read our Introduction to EasyApache documentation.
<i>PHP Version</i>	Your account's default version of PHP. You can configure PHP for your domains in cPanel's <i>MultiPHP Manager</i> interface (<i>cPanel >> Home >> Software >> MultiPHP Manager</i>).
<i>MySQL Version</i>	The server's version of the MySQL® or MariaDB database software.
<i>PostgreSQL Version</i>	The server's version of the PostgreSQL® database software.
<i>Architecture</i>	The processor architecture for the server that hosts your account.
<i>Operating System</i>	The operating system type for the server that hosts your account.

<i>Dedicated IP Address</i>	Your account's dedicated IP address, if one exists.
<i>Shared IP Address</i>	Your account's shared IP address, if one exists.
<i>Path to Sendmail</i>	The absolute filepath to the <i>Sendmail</i> application for the server that hosts your account.
<i>Path to Perl</i>	The absolute filepath to the Perl installation for the server that hosts your account. <div style="border: 1px solid #f0e68c; padding: 10px; margin: 10px 0;"> <p>Note: cPanel & WHM servers include multiple Perl installations. For more information, read our Guide to Perl documentation.</p> </div>
<i>Perl Version</i>	The Perl version for the server that hosts your account.
<i>Kernel Version</i>	The kernel version for the server that hosts your account.

Service Information

The *Service Information* table displays the following status information for each of your server's services:

- *Service* — The service name.
- *Details* — Information about the service's current status on the server.
 - Some services display *up* if the service is currently operational, and *down* if the service has encountered problems.
 - Other services display a number, to indicate the current load, or a percentage, to indicate the current percentage of memory that the item uses.
- *Status* — An icon that indicates the service's current status. A green check icon () indicates that the service is operational. Other icons may indicate a problem with the service.
