

Install an RPM

This documentation is for a previous release of cPanel & WHM. To view our latest documentation, visit our [Home page](#).

For cPanel & WHM 54

([Home](#) >> [Software](#) >> [Install an RPM](#))

[Overview](#)
[Install an RPM](#)

Overview

RPM® (Red Hat Package Manager) refers to a software format, the software that the RPM package contains, and the package management system.

Your cPanel & WHM server includes a number of pre-installed RPMs, and the ability to install more. However, this interface allows you to install an RPM for the operating system distribution, which is separate from the cPanel-provided RPMs.

For more information about RPMs, visit [the RPM website](#).

Note:

The interface requires several seconds to load due to the number of RPMs on your server.

Install an RPM

To install an RPM, perform the following steps:

1. From the *Select package to install* menu, select the RPM that you wish to install.
2. Click *Install*.
