Description

This function retrieves a certificate's Certificate Authority (CA) bundle.

Warning:

We **strongly** recommend that you use the following [UAPI](#) function instead of this function:

- `SSL::get_cabundle` — This function retrieves a certificate's CA bundle and hostname.

Note:

Due to the limited field length of HTTP GET method calls, you **must** use the HTTP POST method. For this reason, you **cannot** use the WHM API method to call this function.

[AddonDomain](#)

Examples

LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
  
// Retrieve the  
account's CA bundles.

```

Note:

For more information, read our [Guide to the LiveAPI System](#).

▼ cPanel Tag System (deprecated)

Warnings:

- In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs. Examples are **only** present in order to help developers move from the old cPanel tag system to our [LiveAPI](#).
- cPanel API 2 calls that use cPanel tags vary in code syntax and in their output.
- For more information, read our [Deprecated cPanel Tag Usage](#) documentation.

Notes:

- You **must** URI-encode values.
- username represents your account-level username.
- You **must** run the `--user=username` command.
- For more information and additional output options, read our [Guide to cPanel API 2](#) documentation or run the `cpapi2 --help` command.
- If you run CloudLinux™, you **must** use the full path of the `cpapi2` command:

```
/usr/local
/cpanel/bi
n/cpapi2
```
