Settings

For cPanel & WHM 11.46

Overview

To modify the settings for a new account, select the options you wish to apply to the account.

> **Important:**
> To access *all* of the options listed below, you must select *Select Options Manually* under the *Package* heading.

Setting list

Option	Description
Dedicated IP	Assigns the new account a static IP address that will *not* be shared with other accounts unless the user specifies an account for which the IP address should be shared. This option is ideal for resellers. • After you select the *Dedicated IP* box, select the IP address from the *Select the IP Address* menu, or select *Auto-Assign* to allow the system to assign an IP address automatically. • This list is populated by unreserved IP addresses. You can read more about reserved IP addresses. > **Note:** > If you create a package with this option enabled, you will not be able to change this option later.
Shell Access	Allows the user access to the server through the command line interface.
FrontPage Extensions	Allows the user to install FrontPage® extensions to the new account. > **Warning:** > We no longer provide FrontPage by default. This option will only be available if you install the Custom Module.
CGI Access	Allows the new account to execute CGI scripts.

Digest Authentication for Web Disk	Enables Digest Authentication support for Web Disk access over a clear text or unencrypted connection. This support is required for users with Windows Vista®, Windows® 7, and Windows® 8 operating systems.
	Note: This is only required if your server does not have an SSL certificate that is signed by a recognized certificate authority.
cPanel Theme	The theme for the user's cPanel account.
	Note: You should choose `x3` for accounts that will host websites, or `x3mail` for accounts that will **only** be mail servers.
Locale	Select the new account's language from the *Locale* menu.

If you have any package extensions installed and have chosen to set options manually, continue to the *Package Extensions* section. Otherwise, continue to the *Reseller Settings* section.
