

Configure PostgreSQL

(WHM >> Home >> SQL Services >> Configure PostgreSQL)

[Overview](#)
[Postgres Config Install](#)
[Create Postgres Users](#)
[Postgres Password](#)
[Additional documentation](#)

Overview

This interface allows you to complete the PostgreSQL® installation process, create PostgreSQL users, and update the PostgreSQL password.

Warning:

This interface's features are for **advanced users only**. The WHM interface only displays this interface if you have already installed PostgreSQL on your server.

Postgres Config Install

After you install PostgreSQL on your server via the command line, you **must** use this interface to complete the installation process. To do this, click *Install Config*.

Warning:

Only use this feature to complete the PostgreSQL installation process. If a functional installation of PostgreSQL already exists on your server, this feature **will** overwrite the current `pg_hba.conf` file.

Create Postgres Users

If cPanel accounts already exist on your server, you **must** create PostgreSQL accounts after the PostgreSQL installation process finishes. To do this, click *Create Users*.

Note:

When you create new cPanel accounts on a server that already has PostgreSQL installed, the system automatically creates the new cPanel account's PostgreSQL user. **Only** use this feature to create PostgreSQL users for existing cPanel accounts, immediately after you install PostgreSQL.

Postgres Password

To update your PostgreSQL password, enter the new password in the text boxes and click *Change Password*.

Enter and confirm the new password in the appropriate text boxes.

Notes:

- The system evaluates the password that you enter on a scale of 100 points. 0 indicates a weak password, while 100 indicates a very secure password.
- Some web hosts require a minimum password strength. A green password *Strength* meter indicates that the password is equal to or greater than the required password strength.
- Click *Password Generator* to generate a strong password. For more information, read our [Password & Security](#) documentation.
