Overview

The *SSL Storage Manager* interface allows system administrators to view detailed information about their SSL resources. System administrators can also delete the listed SSL resources.

Apache's Installed SSL Resources

This section displays the SSL resources that the system installed in the Apache configuration. These resources have VirtualHost entries within the `httpd.conf` file, and users can implement the resources on their sites.

The table under the *Apache's Installed SSL Resources* heading displays information about account owners and their respective keys and certificates:

Column	Description	How to view
<i>Owner</i>	The account that created the key and certificate.	
<i>Key</i>	The key that matches the certificate.	To view the key, click the  icon. A new interface will appear that allows you to copy and paste the information into a safe location. The information includes <i>resource information</i> , <i>raw text</i> , and <i>detailed information</i> .

<i>Certificate</i>	The matching certificate.	<p>To view the certificate, click the</p>  <p>icon. A new interface will appear that allows you to copy and paste the information into a safe location. The information includes <i>resource information</i>, <i>raw text</i>, and <i>detailed information</i>.</p>
--------------------	---------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

User SSL Resources

This section displays information about the available SSL resources.

The table under the *User SSL Resources* heading displays information about available keys, certificates, and certificate signing requests:

Note:

A key, certificate, and certificate signing request on the same row indicate that these resources use the same public key components.

Column	Description
<i>Key</i>	Your account's available keys.
<i>Certificates</i>	Your account's available certificates.
<i>Certificate Signing Requests</i>	Your account's available certificate signing requests.

- To view an item, click the

icon. A new interface will appear that allows you to copy and paste the information into a safe location. The information includes *resource information*, *raw text*, and *detailed information*.

- To delete an item, click the

icon. A new window will appear. Click *OK* to delete, or click *Cancel* to stop the action.
