## Introduction

cPanel & WHM offers many customization options for server administrators and third-party developers. Our APIs and other integration systems offer the tools to successfully build a custom application that works seamlessly with cPanel or WHM.

### Note:

We use the term "integration" to refer to third-party development of software that works with cPanel & WHM.

## What do you want to integrate with?

System administrators use WHM to perform server administration functions:

- Create, manage, and monitor website owner accounts.
- Configure networking information.
- Manage SSL certificates.
- Monitor and restart services.

Website owners use cPanel to perform website management functions:

- Manage individual domains.
- Create and manage email (including Webmail) and FTP accounts.
- Create and manage databases.

Hosting providers use Manage2 Home to manage their licenses and billing:

- [Purchase and manage licenses.](#)
- View contracts with cPanel, Inc.
- Update company information.
- Manage and pay invoices.
