

_UAPIBasics

UAPI Basics

Available in:
cPanel 11.42+

Languages:
PHP, Perl

Important:

You can only use Perl to create custom UAPI modules.

Methods:
GET, POST

Return Formats:
JSON, XML

Important:

cPanel & WHM version 66 **deprecated** XML output.

About UAPI

UAPI accesses and modifies data for cPanel accounts.

Notes:

- These functions may require specific features. To enable or disable features, use WHM's *Feature Manager* interface.
- Unless you call this API via the WHM API, you **must** use the appropriate cPanel ports (2082 or 2083). You can also call some functions via cPanel's Webmail ports (2095 or 2096).
