

Locale XML Upload

(WHM >> Home >> Locales >> Locale XML Upload)

- [Overview](#)
- [Upload an XML File](#)
- [Legacy Language File Upload](#)
- [Additional documentation](#)

Overview

This feature allows you to upload a locale in XML format to your server. After you upload a locale, your users can select it from within the cPanel interface.

- If the locale does not already exist on your server, the system creates all necessary files.
- If the locale exists on your server, the system performs the following actions:
 - Core files — The system only adds keys from the XML data that do not already exist. The system does **not** overwrite any keys.
 - Local edit files — The system overwrites keys on the server with the XML data, and adds any keys that do not already exist.

Upload an XML File

To upload an existing locale, perform the following steps:

1. Click *Choose File*.
2. Select the XML file that you wish to upload.
3. Click *Upload* to complete the process.

Legacy Language File Upload

This interface allows you to upload your own language file or a third-party language file.

To upload a language file, perform the following steps:

1. Click *this interface*.
2. Click *Choose File*, and select the file that you wish to upload.
3. Select the theme that you wish to upload to from the *Theme* menu.

File	Description
/	Uploads the <code>root</code> language file, which supplies verbiage for the cPanel interface when a necessary term does not exist in the primary language files.
<i>paper_lantern</i>	Uploads the Paper Lantern theme's language files.
A custom theme on the server.	If you have a custom cPanel theme, select that theme to upload its language file. The system stores language files for custom themes in the <code>/usr/local/cpanel/base/frontend/theme name/lang/</code> directory, where <code>themename</code> represents the name of the custom theme.

4. Click *Upload*.
