Introduction

The ClamScanner module initiates a ClamAV virus scan.

Important:

In cPanel & WHM version 76, we introduced server profiles and roles. When you enable a non-*Standard Node* server profile, the system **disables** API calls associated with that profile's disabled roles.

Available functions

- [cPanel API 1 Functions - ClamScanner::bars](#) — This function initiates a ClamAV virus scan.

cPanel API 1 Basics

About cPanel API 1

cPanel API 1 accesses information about cPanel accounts.

Warning: cPanel API 1 is deprecated. We strongly recommend using cPanel API 2 or UAPI instead.
