

Installation Guide

For cPanel & WHM version 62

cPanel® & WHM® THE HOSTING PLATFORM OF CHOICE

To install cPanel & WHM on your server, run the following command:

```
cd /home && curl -o latest -L  
https://securedownloads.cpanel.net/  
latest && sh latest
```

This command changes your session to the `home` directory, downloads the latest version of cPanel & WHM, and runs the installation script.

Frequently Asked Questions

Important:

- cPanel, Inc. designs software for commercial hosting. Therefore, we **only** license **publicly visible, static IP addresses**. We do **not** license dynamic, reserved, sticky, or internal IP addresses.
- We do **not** provide an uninstaller. If you wish to remove our software, you **must** reformat the server.
- **Only** install cPanel & WHM on a freshly-installed operating system.
- We recommend that you use the [cPanel & WHM installer](#), which installs all of the services that it requires. If you install services before you install cPanel & WHM, you will encounter compatibility issues.
- New installations of cPanel & WHM default to the fast installation mode. To disable the fast installation mode, use the steps in our [Customize Your Installation](#) documentation.
