Description

This function adds a rewrite for a Ruby application.

Warning:

- We **deprecated** the legacy Ruby codebase in cPanel & WHM version 66. For more information, read our [cPanel Deprecation Plan](#) documentation.
 - To install Ruby and create Ruby web applications in cPanel & WHM version 66 and later, follow the directions in our [How to Create Ruby Web Applications](#) documentation.
 - To register and manage Ruby applications that you create in WHM version 66 and later, use the functions in UAPI [PassengerApps](#) module functions.

Important:

In cPanel & WHM version 76 and later, when you disable the `WebServer` role, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

```

Note:

For more information, read our [Calls from the WHM API](#) documentation.

cPanel Tag System (deprecated)

Warnings:

- In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs. Examples are **only** present in order to help developers move from the old cPanel tag system to our [LiveAPI](#).
- cPanel API 2 calls that use cPanel tags vary in code syntax and in their output.
- For more information, read our [Deprecated cPanel Tag Usage documentation](#).
