Overview

Note:

If you have not already installed cPanel & WHM on your server, use our [Installation Guide](#) to complete the installation process.

The WHM interface provides the server's `root` user and resellers with access to all of WHM's server administration features.

The WHM interface consists of the following sections:

1. [Top navigation bar](#)
2. [Support menu and View](#)
3. [Side navigation menu](#)
4. [Important Next Steps](#)
5. [Features](#)

Top navigation bar

WHM's top navigation bar remains visible as you navigate throughout the WHM interface.

- Click *News* to view important news and announcements from cPanel, Inc.
- Click *Change Log* to view the cPanel & WHM change logs.
- Click *Log Out* to log out of your WHM account.
- Click the version number to navigate to WHM's *Upgrade to Latest Version* interface (*WHM >> Home >> cPanel >> Upgrade to Latest Version*).
- Click *Load Averages* to navigate to WHM's *Process Manager* interface (*WHM >> Home >> System Health >> Process Manager*). The numbers that follow this link represent the server's one-minute, five-minute, and 15-minute [load averages](#), respectively.

You may also see important server notices in this section of the interface. For example, if the most recent attempt to upgrade cPanel & WHM failed, you may see a *The last attempt to update cPanel & WHM was blocked.* warning, which you can click to review a list of upgrade blockers.

Support menu and View

In the top right corner of the interface, you have two sets of options:

Click the lifesaver icon (

) in the top right of the interface to view the *Support* menu.

- Click *cPanel & WHM FAQ* to access our [cPanel Knowledge Base](#) documentation.
- Click *Support Forums* to access the [cPanel Forums](#).
- Click *Documentation* to access the main page of our [WebHost Manager](#) documentation (from WHM's *Home* interface) or the documentation for the current interface (from other WHM interfaces).
- Click *Contact cPanel* to submit a ticket to cPanel Technical Support.

By default, the interface only displays a selection of the most helpful features in WHM. To view all of WHM's sections and features in the *Home* interface, set the *View* toggle to *Classic*.

Note:

You can also use the side navigation menu to access cPanel & WHM's other features.

Side navigation menu

The side navigation menu in WHM provides access to all of WHM's interfaces, and allows you to quickly search for specific features. For more information about WHM's features and interfaces, read our [WHM Features List](#) documentation.

We hide this menu by default. To show or hide this menu, click the expand (

) or collapse (

) icons, respectively. You can also click *View All Features* at the bottom of the interface to expand this menu.

Explore WHM

WHM provides tools to manage your server and its accounts, access DNS configurations, and more.

[View All Features](#)

If the side navigation menu is collapsed, the Explore WHM section appears at the bottom of the interface.

- To search for a feature, enter one or more keywords in the text box and click the search icon (

).

- To quickly navigate to a WHM interface, use the menu of available features:
 - To expand or collapse all menu sections with one action, click the expand icon (

) or collapse icon (

) at the top of the menu, immediately below the search text box.

- To expand or collapse a single menu section, click the arrow icon (
- 
-) for that section.
- To access a WHM section, click that section's name in the menu.
 - To access a WHM interface, click that interface's name in the menu.

Important Next Steps

The first time that you log in to WHM, the interface displays an *Important Next Steps* section with quick access to important actions for new servers.

- To hide this section of the interface, click *Dismiss*.
- To restore this section of the interface after you hide it, run the following command as the `root` user:

```
sed -i '/home:hide_important_next_steps/d'
/var/cpanel/whm/nvdata/root.yaml
```

Features

The WHM *Home* interface provides quick access to the features that manage cPanel & WHM servers and accounts.

Notes:

By default, we hide *Feature Showcase* items on new installations until new items are available for the next server update. For more

information and steps to view these items, read our [Guide to the Feature Showcase](#) documentation.

Trial license banner

Servers that use a trial license display a banner above the WHM *Home* interface's icons. This banner displays the server's trial license status, and you can click *Purchase a License* to buy a full cPanel, Inc. license. For more information, read our [How to Purchase a cPanel License](#) documentation.

cPanel Analytics

If you have enabled [cPanel Analytics](#) at the server level, a lightbulb icon (

) will appear on the right side of the interface. Click the icon to display your account-level cPanel Analytics options. Select *Allow* to enable cPanel Analytics for your account, or select *Deny* to disable it.

Note:

Plugin developers should make **certain** to respect user privacy. We **strongly** recommend that you anonymize any data that you collect for analysis.

For more information about how cPanel, L.L.C. handles private data, read our [cPanel Analytics](#) documentation.

Legal agreements and initial setup

Note:

For questions about your license agreement, contact [cPanel Customer Service](#).

When you log in to WHM for the first time on a new cPanel & WHM server, the system prompts you to accept our End User License Agreement (EULA). This agreement provides the terms under which you use cPanel, Inc.'s software. Read the EULA carefully.

- You **must** accept this agreement in order to use cPanel & WHM.
 - If you click *Cancel and Exit*, a confirmation message will appear.
 - If you click *OK* for this message, the system will automatically log you out of WHM. The EULA will appear again the next time that you log in to WHM.
- To remove acceptance of the EULA on an existing server, delete the appropriate touchfile in the `/var/cpanel/activate/` directory. To continue to use cPanel & WHM, you must accept the EULA again the next time that you log in.

After you accept the EULA, the system will optionally allow you to specify a contact email address and two nameservers. To view this interface on an existing server, delete the `/etc/.whostmgrft` touchfile.
