

WHM Features List

Basic WebHost Manager Setup

Use the [Basic WebHost Manager Setup](#) interface to configure basic options for cPanel & WHM.

Change Root Password

Use the [Change Root Password](#) interface to change your server's `root` password without the previous `root` password.

CloudLinux LVE Manager

Use the [CloudLinux LVE Manager](#) interface to view LVE Manager information for accounts on your server.

Note:

This interface **only** displays for `root`-enabled users on CloudLinux™ servers.

Configure cPanel Cron Jobs

Use the [Configure cPanel Cron Jobs](#) interface to configure cron jobs for cPanel & WHM updates and backups.

Initial Quota Setup

Use the [Initial Quota Setup](#) interface to confirm that the system uses disk quotas on the directories in which your cPanel users store their files.

Server Profile

Use the [Server Profile](#) interface to select your server's profile. Server profiles enable and disable specific services to allow you to optimize your server for a specific task.

Server Time

Use the [Server Time](#) interface to set your server's time zone and synchronize it with the time server.

Statistics Software Configuration

Use the [Statistics Software Configuration](#) interface to view information about your server's statistics and statistics software.

Terminal

Use the [Terminal](#) interface to access an in-browser terminal application for direct command-line access within a cPanel & WHM session.

Tweak Settings

Use the [Tweak Settings](#) interface to configure settings for cPanel, WHM, and their associated services.

Update Preferences

Use the [Update Preferences](#) interface to define an update configuration for cPanel & WHM.
