

cPanel Web Applications FAQ

For cPanel & WHM version 64

[Can I add my own module for WHM or cPanel?](#)
[Can I integrate my web application with cPanel or with .NET?](#)
[Can I view my Webalizer statistics but not log in to cPanel?](#)
[Does cPanel support WebDav?](#)
[How do I install Fantastico?](#)
[Additional documentation](#)

Can I add my own module for WHM or cPanel?

To add your own module for cPanel & WHM, read our [Developer Documentation](#).

Can I integrate my web application with cPanel or with .NET?

You can use cPAddons to integrate third-party software with cPanel. However, cPAddons are currently only compatible with applications that use PHP or Perl.

Can I view my Webalizer statistics but not log in to cPanel?

Your web hosting provider **must** grant you permission to view your [Webalizer](#) statistics without the need to log in to cPanel.

To do this, your web hosting provider creates a new directory (for example, `/home/usr/public_html/webalizer/stats`), and then creates a username and password in WHM for this directory.

Note:

This username and password will be different from your cPanel username and password.

Enter `http://example.com/stats` in your web browser and log in with your new username and password to view your Webalizer statistics.

Does cPanel support WebDav?

Yes. You can create a WebDav folder in cPanel's [Web Disk](#) interface (*Home >> Files >> Web Disk*). cPanel, Inc. also supplies iOS and Android applications (apps) to allow you to use cPanel's [Web Disk](#) feature on your mobile device.

How do I install Fantastico?

If you are a cPanel user or reseller, contact your hosting provider to request access to this additional service.

If you are a server administrator, [contact Netenburg about Fantastico](#). cPanel is **not** associated with Netenburg or Fantastico.
