## Description

This function unsuspends incoming email for an email account.

### Important:

In cPanel & WHM version 76 and later, when you disable the `MailReceive` role, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

## Examples

```
https://hostname.example.com:2083/cpsess#####/execute/Email/unsuspend_incoming?email=user%40example.com
```

### Note:

This example calls the UAPI function via a cPanel session. For more information, read our [Guide to UAPI](#) documentation.

```
$cpanel = new CPANEL(); // Connect to cPanel - only do this once.
```

```
// Unsuspend incoming email for the user's email account.  
$unsuspend_incoming = $cpanel->uapi(  
    'Email', 'unsuspend_incoming',  
    array(  
        'email' => 'user%40example.com',  
    )  
);
```

### Note:

For more information, read our [Guide to the LiveAPI System](#).
