Description

This function grants permissions to a MySQL® database user.

Warning:

cPanel API 1 is **deprecated**. Do not use this function. Instead, we **strongly** recommend that you use the following newer functions:

- **UAPI (recommended) — [Mysql::set_privileges_on_database](#)** — This function sets a MySQL® database user's privileges.
- **cPanel API 2 — [MysqlFE::setdbuserprivileges](#)** — This function grants privileges to a user on a database.

Examples

Function information

Module:
Mysql
API
Version:
cPanel API 1
Available in:
cPanel 11+
Methods:
GET, POST
Required
Parameters:
dbname, dbuser,
perms_list
Return Format:
s:
(none)

About this module

The **Mysql** manages MySQL users, databases, and services.

About cPanel API 1

cPanel API 1 accesses information about cPanel accounts.

Warning:

cPanel API 1 is **deprecated**. We **strongly** recommend that you use **cPanel API 2 or UAPI** instead.

Notes:

• The functions may require a few attempts. To view whether available lists on a specific panel server, visit WHM's Functions page at [ur.eM.anag.agerinteface](#). • Unless you can

```
$cpanel = new CPANEL(); // Connect to cPanel - only do this once.  
$add_perms = $cpanel->api1('Mysql','adduserdb', array ('database','username','alter lock create')) ; // Call the function.
```

 **Note:**

For more information, read our [Guide to the LiveAPI System](#).

```
my $cpaliveapi = Cpanel::LiveAPI->new(); # Connect to cPanel - only do this once.  
my $add_perms = $cpaliveapi->api1('Mysql','adduserdb', ['database','username','alter lock create']) ; # Call the function.
```

 **Note:**

For more information, read our [Guide to the LiveAPI System](#).

 **Warning:**

In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs.

```
<cpanel Module="Mysql::adduserdb( $FORM  
( 'dbname','user','perms_list'))">
```

```
cpapi1 --user=username Mysql adduserdb database user  
"alter lock create"
```

 **Notes:**

- You **must** [URI-encode](#) these values.
- username represents your account-level username.
- For more information and additional output options, read our [Guide to cPanel API 1](#) documentation or run the cpapil --help command.
- If you run CloudLinux™, you **must** use the full path of the cpapil command:

```
/usr/local/cpanel/bin/cpapil
```

This function does not return output.

Parameters

Parameter	Type	Description	Possible values	Example
dbname	string	Required The MySQL database name.	<p>A valid MySQL database.</p> <p>Important:</p> <p>To learn more about database username limits, click your database type:</p> <p>MySQL limits the database username to 16 characters. The system includes the database prefix (the first eight characters of the cPanel account's username and an underscore character) in the character count for the username.</p> <p>For example:</p> <ul style="list-style-type: none"> A MySQL database with the db_ prefix allows usernames that contain up to 13 characters. A MySQL database with the example_ prefix allows usernames that contain up to eight characters. <p>MariaDB limits the database username to 47 characters. The system includes the database prefix (all of the cPanel account's username and an underscore character) in the character count for the username.</p> <p>For example:</p> <ul style="list-style-type: none"> A MariaDB database with the db_ prefix allows usernames that contain up to 44 characters. A MariaDB database with the example_ prefix allows usernames that contain up to 39 characters. 	database
username	string	Required The MySQL user's name.	A valid MySQL user.	user
perms_list	string	Required The permissions to grant to the MySQL user.	<p>Use any of the following values in a space-delimited list:</p> <ul style="list-style-type: none"> alter — ALTER temporary — CREATE TEMPORARY TABLES routine — CREATE ROUTINE create — CREATE delete — DELETE drop — DROP select — SELECT insert — INSERT update — UPDATE references — REFERENCES index — INDEX lock — LOCK TABLES all — ALL 	alter lock create

Returns

This function does not return output.
