

Locales

For cPanel & WHM version 58

(Home >> Locales)

This set of features allow you to change the language that your users' cPanel interfaces display.

- [Configure Application Locales](#) — This interface allows you to choose the statistic software's language for each locale setting.
- [Copy a Locale](#) — This interface allows you to copy a locale to a standard locale or a non-standard locale.
- [Delete a Locale](#) — This interface allows you to delete a locale.
- [Edit a Locale](#) — This interface allows you to edit a locale.
- [Locale XML Download](#) — This interface allows you download an existing locale in XML format.
- [Locale XML Upload](#)— This interface allows you upload an existing locale in XML format.
- [View Available Locales](#) — This interface allows you to view available locales, cross-referenced against the themes in which they are available.

Additional documentation

- [Guide to Locales](#) — The locale system localizes text in Perl, Template Toolkit, or JavaScript code.
