

The manage_greylisting Script

Overview

The `/usr/local/cpanel/scripts/manage_greylisting` manages the cPanel Greylisting service.

The `/usr/local/cpanel/scripts/manage_greylisting` script

To use the `/manage_greylisting` script to manage the Greylisting service, run the following command:

```
/usr/local/cpanel/scripts/manage_greylisting [options]
```

Options

When you run the `/manage_greylisting` script, you can specify the following options:

Option	Description	Example
<code>--init</code>	<p>Initialize the SQLite database with the basic data structure.</p> <div data-bbox="337 772 977 909"><p> Note:</p><p>The SQLite database resides in the <code>/var/cpanel/greylist/greylist.sqlite</code> file.</p></div>	<pre>/usr/local/cpanel/scripts /manage_greylisting --init</pre>
<code>--reset</code>	<p>Forcibly reset the SQLite database.</p> <div data-bbox="337 993 977 1129"><p> Note:</p><p>This option attempts to preserve the Trusted Hosts list if the Greylisting service runs on the server.</p></div>	<pre>/usr/local/cpanel/scripts /manage_greylisting --reset</pre>
<code>--trust</code>	<p>Trust the IP addresses for the common specified email services. Specify this option more than once to trust multiple services at the same time.</p> <p>This script recognizes the following common email services:</p> <ul style="list-style-type: none">• aol• apple• att• bank_of_america• chase_bank• comcast• cpanel• firstdata• google• hotmail• mcafee_email_saas• microsoft• microsoft_eop• office365• outlook• roadrunner• sbcglobalnet• symantec_messagelabs• tucows_opensrs• verizon• wellsfargo• yahoo	<pre>/usr/local/cpanel/scripts /manage_greylisting --trust cpanel</pre>

<pre>--import</pre>	<p>Import the Trusted Hosts list that the specified JSON file contains.</p>	<pre>/usr/local/cpanel/scripts /manage_greylisting --import /path/to /json/file</pre>
<pre>--export</pre>	<p>Export the current Trusted Hosts list.</p> <p>To export the list to a file, specify the <code>export_to</code> option or redirect via <code>STDOUT</code>.</p>	<pre>/usr/local/cpanel/scripts /manage_greylisting --export /usr/local/cpanel/scripts /manage_greylisting --export -- export_to export.json /usr/local/cpanel/scripts /manage_greylisting --export > export. json</pre>
<pre>-- update_common_ mail_providers</pre>	<p>Update the common mail providers data in the database.</p> <div data-bbox="337 646 979 779" style="border: 1px solid #f0e68c; padding: 10px; margin-top: 10px;"> <p> Note:</p> <p>You can specify the <code>--force</code> flag with this option to forcibly update the IP address data in the database.</p> </div>	<pre>/usr/local/cpanel/scripts /manage_greylisting -- update_common_mail_providers</pre>
