

cPanel Features List

File Manager

Use the [File Manager](#) interface to manage your files. This feature allows you to upload, create, remove, and edit files without the need for FTP or other third-party applications.

Images

Use the [Images](#) interface to manage your images. You can view and resize images, or use this feature to convert image file types.

Directory Privacy

Use the [Directory Privacy](#) interface to limit access to certain resources on your website. Enable this feature to password-protect specific directories that you do not want to allow visitors to access.

Disk Usage

Use the [Disk Usage](#) interface to scan your disk and view a graphical overview of your account's available space. This feature can help you to manage your disk space usage.

Web Disk

Use the [Web Disk](#) feature to access to your website's files as if they were a local drive on your computer.

FTP Accounts

Use the [FTP Accounts](#) interface to manage File Transfer Protocol (FTP) accounts.

FTP Connections

Use the [FTP Connections](#) interface to view current connections to your site via FTP. Terminate FTP connections to prevent unauthorized or unwanted file access.

Anonymous FTP

Use the [Anonymous FTP](#) interface to allow users to connect to your FTP directory without a password. Use of this feature may cause security risks.

Backup

Use the [Backup](#) interface to back up your website. This feature allows you to download a zipped copy of your cPanel account's contents (home directory, databases, email forwarders, and email filters) to your computer.

File and Directory Restoration

Use the [File and Directory Restoration](#) interface to restore items from backed-up files.

Backup Wizard

Use the [Backup Wizard](#) interface as a step-by-step guide to assist you in backup creation.

Git™ Version Control

Use the [Git Version Control](#) interface to host Git repositories on your cPanel account.
