

Purchase and Install an SSL Certificate

For cPanel & WHM version 64

(Home >> SSL/TLS >> Purchase and Install an SSL Certificate)

- [Overview](#)
- [Purchase a certificate](#)
- [Additional documentation](#)

Overview

This interface allows you to log in to a user's cPanel interface to purchase an SSL certificate for them through cPanel's [SSL/TLS Wizard](#) interface (Home >> Security >> SSL/TLS Wizard).

Note:

This interface automatically enables the following required features to purchase and install SSL certificates from cPanel's [SSL/TLS Wizard](#) interface for the user:

- cPanel Market — `market`
- SSL Host Installer — `sslinstall`
- SSL/TLS Wizard — `tls_wizard`

For more information, read our [Feature Manager](#) documentation.

Purchase a certificate

The interface displays a list of accounts on the server, their primary domain names, and links that will redirect you to a user's [SSL/TLS Wizard](#) interface.

Click [Go to cPanel](#), then click [Purchase SSL](#) in the pop up window to confirm and navigate to the user's [SSL/TLS Wizard](#) interface.

Notes:

- Use your own credentials to log in to the cPanel Store, **not** the cPanel user's credentials.
- The system will send the purchase notices to the cPanel user's contact address. If the site owner has **not** configured a contact address, the system will send the notice to the purchaser.

For more information, read our [SSL/TLS Wizard](#) documentation.
