

# SMTP Restrictions

(WHM >> Home >> Security Center >> SMTP Restrictions)

- [Overview](#)
- [Manage SMTP restrictions](#)
- [Additional documentation](#)

## Overview

This interface allows you to configure your server so that only the mail transport agent (MTA), Mailman mailing list software, and the `root` user can connect to remote SMTP servers.

This will deny other users and services the ability to bypass your mail server to directly send mail, which is common practice for spammers.

## Manage SMTP restrictions

Click *Enable* to deny users the ability to bypass your mail server to send mail. To allow users the ability to bypass your mail server, click *Disable*.
