

# Force Password Change

(WHM >> Home >> Account Functions >> Force Password Change)

- [Overview](#)
- [Force change](#)
- [Additional documentation](#)

## Overview

This feature allows you to force users to change their passwords. After you use this feature, the system prompts cPanel users to change their passwords the next time that they log in to cPanel. The system will not allow them to access to the full functionality of the cPanel interface until they change their password.

## Force change

To force specific users to change their passwords, perform the following steps:

1. Select the *Forced?* checkboxes that correspond to the desired cPanel users.
  - Select as many cPanel users as you wish.
  - Use the buttons at the top of the interface to select or deselect all of your cPanel users.
2. Click *Submit*.
