Description

This function installs a Sender Policy Framework (SPF) record for a domain on the DNS server.

Important:

When you disable the MailSend role, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

Examples

```
https://hostname.example.com:2083/cpsess#####/execute/EmailAuth/install_spf_records?domain=example.com&domain=anotherexample.com&record=v%3dspf1%20ip4:10.0.0.1%20%2Ba%20%2Bmx%20%2Bip4:10.0.0.2%20%2Bip4:10.0.0.3%20-all&record=v%3dspf1%20ip4:10.0.0.1%20%2Ba%20%2Bmx%20%2Bip4:10.0.0.2%20%2Bip4:10.0.0.3%20-all
```

Note:

This example calls the UAPI function via a cPanel session. For more information, read our [Guide to UAPI](#) documentation.

```
$cpanel = new CPANEL(); // Connect to cPanel - only do this once.

// Install an SPF record for a domain on the DNS server.
$poll = $cpanel->uapi(
    'EmailAuth', 'install_spf_records',
    array(
        'domain' => 'example.com',
        'domain' => 'anotherexample.com',
        'record' => 'v=spf1 ip4:10.0.0.1 %2Ba %2Bmx %2Bip4:10.0.0.2 %2Bip4:10.0.0.3 -all',
        'record' => 'v=spf1 ip4:10.0.0.1 %2Ba %2Bmx %2Bip4:10.0.0.2 %2Bip4:10.0.0.3 -all'
    )
);
```

Note:

For more information, read our [Guide to the LiveAPI System](#).

Function information

Module:

EmailAuth

API Version:

UAPI

Available in:

cPanel 78+

Methods:

GET, POST

Required

Parameters:

domain, record

Return Format:

JSON

Legacy Equivalents:

(none)

About this module

The EmailAuth module manages email authentication to ensure email deliverability.

About UAPI

UAPI accesses and modifies data for cPanel accounts.

```

Notes:

- You **must** [URI-encode](#) values.
- username represents your account-level username.
- For more information and additional output options, read our [Guide to UAPI](#) documentation or run the `uapi --help` command.
- If you run CloudLinux™, you **must** use the full path of the `uapi` command:

```
/usr/local/cpanel/bin/uapi
```

```

Parameters

Parameter	Type	Description	Possible values	Example
domain	string	Required The domain for which to install an SPF record on the DNS server. <div style="border: 1px solid #ccc; padding: 5px; margin-top: 10px;">Note: To install multiple SPF records, duplicate the parameter name. For example, use the domain=example.com, domain=example2.com, and domain=example3.com parameters.</div>	A valid domain.	example.com
record	string	Required An SPF record. <div style="border: 1px solid #ccc; padding: 5px; margin-top: 10px;">Note: You must provide this parameter for each domain parameter.</div>	A valid SPF record.	v=spf1 ip4:10.0.0.1 %2Ba %2Bmx %2Bip4:10.0.0.2 %2Bip4:10.0.0.3 -all

Returns

Return	Type	Description	Possible values	Example
data	array of hashes	An array that contains information about the domain's SPF record installation to the DNS server.	Each hash contains the domain, msg, and status returns.	
domain	string	The SPF record's associated domain on the DNS server. This function returns this value in the data array.	A valid domain.	example.com
msg	string	The SPF record's installation status to the DNS server. This function returns this value in the data array.	A valid string.	[ADD:TXT@example.com.:v=spf1 ip4:10.0.0.1 %2Ba %2Bmx %2Bip4:10.0.0.2 %2Bip4:10.0.0.3 -all]
status	Boolean	Whether the system installed the SPF record to the DNS server. This function returns this value in the data array.	<ul style="list-style-type: none">1 — The system installed the SPF record on the DNS server.0 — The system cannot install the SPF record on the DNS server.	1
