

The view_transfer Script

- [Overview](#)
- [Call the script](#)
- [Arguments](#)
- [Additional documentation](#)

Overview

You can use the `/usr/local/cpanel/bin/view_transfer` script to monitor transfer sessions. The script displays the progress of each individual active transfer and restoration.

Call the script

To use this script, run the following command as the `root` user:

```
/usr/local/cpanel/bin/view_transfer transfer_session_ID
```

Note:

In this example, `transfer_session_ID` represents the ID of the transfer session that you wish to view.

Arguments

The `/usr/local/cpanel/bin/view_transfer` script accepts the following arguments:

Argument	Description
<code>--overview</code>	Skips the progress of each individual transfer and restore.
