Description

This function retrieves a certificate's Certificate Authority (CA) bundle.

Warning:

We **strongly** recommend that you use the following [UAPI](#) function instead of this function:

- [SSL::get_cabundle](#) — This function retrieves a certificate's CA bundle and hostname.

Note:

Due to the limited field length of HTTP GET method calls, you **must** use the HTTP POST method. For this reason, you **cannot** use the WHM API method to call this function.

 **Note:**
For more information, read our [Guide to the LiveAPI System](#).

Module:
SSL
API Version:
[cPanel API 2](#)
Available in:
cPanel 11+
Methods:
POST

 **Note:**
The HTTP GET method has a limited field length that does not accommodate this function's input parameters. You **must** use HTTP POST.

Required Parameters:
crt
Return Format:
JSON, XML

 **Notes:**

- XML output [call this](#).
- cPanel [deprecates](#) XML output.

Legacy Equivalents:

- `SSL::getcabundle`

Note:

For more information, read our [Guide to the LiveAPI System](#).

The SSL module manages certificates, certificate requests, and keys on your server.

About cPanel API 2

cPanel API 2 accesses and modifies data for cPanel accounts.

Warnings:

- In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs. Examples are **only** present in order to help developers move from the old cPanel tag system to our [LiveAPI](#).
- cPanel API 2 calls that use cPanel tags vary in code syntax and in their output.
- For more information, read our [Deprecated cPanel Tag Usage](#) documentation.

Notes:

- You **must** [URI-encode](#) values.
- `username` represents your account-level username.
- You **must** run the `--user=username` command.
- For more information and additional output options, read our [Guide to cPanel API 2](#) documentation or run the `cpapi2 --help` command.
- If you run CloudLinux™, you **must** use the full path of the `cpapi2` command:

```
/usr/local/cpanel/bin/cpapi2
```

Find a function

Related functions

- [cPanel API 2 Modules - SSL](#) — The SSL module manages certificates, certificate requests, and keys on your server.
- [cPanel API 2 Functions - SSL::fetchbundle](#) — This function retrieves a certificate's Certificate Authority (CA) bundle.
- [cPanel API 2 Functions - SSL::fetchinfo](#) — This function retrieves a domain's SSL certificate, private key, CA bundle, owner, and IP address.
- [cPanel API 2 Functions - SSL::genctr](#) — This function generates a self-signed certificate.
- [cPanel API 2 Functions - SSL::genscr](#) — This function generates a Certificate Signing Request (CSR).

Returns

Return	Type	Description	Possible values	Example
domain	<i>string</i>	The certificate's hostname.	A valid hostname.	example.com
bundle	<i>string</i>	The signing authority that issued the CA bundle.	The signing authority's hostname.	example.com

 **Note:**
Self-signed certificates return the account's primary domain.
