## Description

This function retrieves an account's statistics.

### Warning:

We **strongly** recommend that you use the following [UAPI](#) function instead of this function:

- [StatsBar::get\\_stats](#) — This function retrieves a cPanel account's statistics.

## Examples

```
https://hostname.example.com:2087/cpsess#####/json-api/cpanel?
cpanel_jsonapi_user=user&cpanel_jsonapi_apiversion=2&cpanel_jsonapi_module=StatsBar&cpanel_jsonapi_func=stat&display=ftpaccounts%7Cperlversion%7Cdedicatedip&warnings=0&warninglevel=high&warnout=0&infinityimg=/home/example/infinity.png&infinitylang="infinity"&rowcounter=even
```

### Note:

For more information, read our [Calls from the WHM API](#) documentation.

```
$cpanel = new CPANEL(); // Connect to cPanel - only do this once.

// Display stats bar data for
ftpaccounts|perlversion|dedicatedip
$stats_bar = $cpanel->api2(
    'StatsBar', 'stat',
    array(
        'display' =>
'ftpaccounts|perlversion|dedicatedip',
        'warnings' => '0',
        'warninglevel' => 'high',
        'warnout' => '0',
        'infinityimg' => '/home/example
/infinity.png',
        'infinitylang' => 'infinity',
        'rowcounter' => 'even'
    )
);
```

### Note:

For more information, read our [Guide to the LiveAPI System](#).

## Function information

**Module:**

StatsBar

**API Version:**

cPanel API 2

**Available in:**

cPanel 11+

**Methods:**

GET, POST

**Required Parameters:**

display, warnings, warninglevel, warnout, infinityimg, infinitylang, rowcounter

**Return Format:**

JSON, XML

### Notes:

- XML or call this
- cPanel deprecated XML or

**Legacy Equivalents:**  
(none)

## About this module

The StatsBar module displays statistics information.

## About cPanel API 2

cPanel API 2 accesses and modifies data for cPanel accounts.

```
my $cpliveapi = Cpanel::LiveAPI->new(); # Connect to
cPanel - only do this once.

# Display stats bar data for
ftpaccounts|perlversion|dedicatedip
my $stats_bar = $cpliveapi->api2(
    'StatsBar', 'stat',
    {
        'display' =>
'ftpaccounts|perlversion|dedicatedip',
        'warnings' => '0',
        'warninglevel' => 'high'
        'warnout' => '0'
        'infinityimg' => '/home/example
/infinity.png'
        'infinitylang' => 'infinity'
        'rowcounter' => 'even'
    }
);
```

#### Note:

For more information, read our [Guide to the LiveAPI System](#).

#### Warnings:

- In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs. Examples are **only** present in order to help developers move from the old cPanel tag system to our [LiveAPI](#).
- cPanel API 2 calls that use cPanel tags vary in code syntax and in their output.
- For more information, read our [Deprecated cPanel Tag Usage](#) documentation.

```
cpapi2 --user=username StatsBar stat display=ftpaccounts%
7Cperlversion%5C%7Cdedicatedip warnings=0
warninglevel=high warnout=0 infinityimg=/home/example\
/infinity.png infinitylang=infinity rowcounter=even
```

#### Notes:

- You **must** [URI-encode](#) values.
- `username` represents your account-level username.
- You **must** run the `--user=username` command.
- For more information and additional output options, read our [Guide to cPanel API 2](#) documentation or run the `cpapi2 --help` command.
- If you run CloudLinux™, you **must** use the full path of the `cpapi2` command:

```
/usr/local/cpanel/bin/cpapi2
```

• These functions may require a feature list. To view the available features, visit the WHM's [Feature Manager](#) interface.

## Parameters

Parameter	Type	Description	Possible values	Example
display	string	<b>Required</b> A list of the account's statistics.	<ul style="list-style-type: none"> <li>ftppaccounts — Information about the account's FTP accounts.</li> <li>perlversion — The server's Perl version.</li> <li>dedicatedip — cPanel account websites that use dedicated IP addresses.</li> <li>hostname — The server's hostname.</li> <li>operatingsystem — The server's operating system</li> <li>sendmailpath — The path to the system's sendmail binary.</li> <li>autoresponders — Information about the cPanel account's auto-responders.</li> <li>perlpath — The Perl binary's absolute path.</li> <li>emailforwarders — Information about the cPanel account's forwarders.</li> <li>bandwidthusage — Information about the account's bandwidth usage.</li> <li>emailfilters — Information the cPanel account's email filters.</li> <li>mailinglists — Information the cPanel account's mailing lists.</li> <li>diskusage — Information the account's disk space usage.</li> <li>phpversion — The server's PHP version.</li> <li>sqldatabases — Information about the account's SQL databases.</li> <li>apacheversion — The server's Apache version.</li> <li>kernelversion — The operating system's kernel version.</li> <li>shorthostname — The short version of your server's hostname.</li> <li>parkeddomains — Information about the cPanel account's parked domains (aliases).</li> <li>cpanelbuild — The server's cPanel build.</li> <li>theme — The cPanel account's theme.</li> <li>addondomains — Information about the cPanel account's addon domains.</li> <li>cpanelrevision — The build of cPanel that runs on the server.</li> <li>machinetype — The type of operating system your server runs.</li> <li>cpanelversion — The server's cPanel version.</li> <li>mysqldiskusage — The amount of disk space that the cPanel account's MySQL databases use.</li> <li>mysqlversion — The server's MySQL version.</li> <li>subdomains — Information about the cPanel account's subdomains.</li> <li>postgresdiskusage — The amount of disk space that the cPanel account's PostgreSQL databases use.</li> <li>sharedip — Any of the cPanel account's websites that use a shared IP address.</li> <li>hostingpackage — The cPanel account's hosting package.</li> <li>emailaccounts — Information about the cPanel account's email accounts.</li> </ul>	ftppaccounts perlversion dedicatedip
warnings	Boolean	<b>Required</b> Whether to return all results.	<ul style="list-style-type: none"> <li>1 — Return only warnings that exceed the warninglevel parameter's value.</li> <li>0 — Return all results.</li> </ul>	0
warninglevel	integer	<b>Required</b> The minimum level at which to return warnings.	A positive integer.	87
warnout	Boolean	<b>Required</b> Whether to display results with a value of 100%.	<ul style="list-style-type: none"> <li>1 — Display results with a value of 100%</li> <li>0 — Hide results with a value of 100%</li> </ul>	0

## Returns

Return	Type	Description	Possible vales	Example
zeroisunlimited	Boolean	Whether a value of 0 means unlimited or zero.	<ul style="list-style-type: none"> <li>• 1 — Unlimited.</li> <li>• 0 — Zero.</li> </ul>	1
percent10	integer	The percentage of value.	A positive integer.  <div style="border: 1px solid #ccc; padding: 5px; background-color: #fff9c4;"><b>Note:</b> Round to the nearest ten if applicable.</div>	0
percent	integer	The percentage of value, if applicable.	An integer value.	0
item	string	A human-readable version of the queried item.	A string value.	Disk Space Usage
max	string	The queried value's limit.	A string value.	unlimited
langkey	string	The value's display locale.	A string value.	INDXDiskUsage
percent5	integer	The percentage of value.	An integer value.  <div style="border: 1px solid #ccc; padding: 5px; background-color: #fff9c4;"><b>Note:</b> Round to the nearest five if applicable.</div>	0
id	string	The display key.	A string value.	diskusage
module	string	The module that retrieved the information.	A string value.	Quota
count	string	The queried data's value.	A string value.	0.77
_count	string	The queried data's value.	A string value.	0.77
name	string	The display key.	A string value.	diskusage
_max	string	The queried parameter's limit.	A string value.	unlimited
normalized	Boolean	Whether the function normalized the output values.	<ul style="list-style-type: none"> <li>• 1 — Normalized.</li> <li>• 0 — Did <b>not</b> normalize.</li> </ul>	1
_percent20	integer	The percentage of value.	An integer value.  <div style="border: 1px solid #ccc; padding: 5px; background-color: #fff9c4;"><b>Note:</b> Round to the nearest twenty if applicable.</div>	0
