Overview

This feature displays your server's current partition and hard disk usage.

The Current Disk Usage Information Table

This table displays how the system stores information on your partition or hard disk.

Column	Description
<i>Device</i>	The device name of the partition or hard disk.
<i>Size</i>	The total size of the partition or hard disk.
<i>Used</i>	The amount of space that the system uses on the partition or hard disk.
<i>Available</i>	The amount of available space on the partition or hard disk.
<i>Percent Used</i>	The percentage of space that the system uses on the partition or hard disk.
<i>Mount Point</i>	The location of the partition or hard disk in the server's directory structure.

The IO Statistics Table

The *IO* (input/output) *Statistics* table displays information from the [iostat tool](#) about how the system writes and reads files on your server's partitions and hard drives.

The system calculates these statistics from data since last time that server restarted.

Column	Description
<i>Device</i>	The name of the partition or hard disk.
<i>Trans./Sec</i>	The number of blocks that the system writes and reads per second on the partition or hard disk. This measures of the partition's or hard drive's ability to manipulate information.
<i>Blocks Read /sec</i>	The number of blocks that the system reads per second from the partition or hard disk. This measures the partition's or hard drive's rate of output.
<i>Blocks Written /Sec</i>	The number of blocks that the system writes per second to the partition or hard disk. This measures the partition's or hard drive's rate of input.
<i>Total Blocks Read</i>	The total number of blocks that the system has read from the partition or hard drive. This measures how much information your hard drive has read.
<i>Total Blocks Written</i>	The total number of blocks that the system has written to the partition or hard drive. This measures how much information your hard drive has written.
